Learn How To Fly R/C Aircraft!

Radio Control Club of Detroit, located within Wetzel Recreation Area and in concert with the Department of Natural Resources (DNR) is proud to present a unique opportunity to learn about our wonderful hobby as well as actually experience the thrill and excitement of flying a real Radio Controlled Trainer model airplane. Open to anyone ten (10) years of age or older. Under (18) must be accompanied by parent and/or responsible adult. **Limited registration space available.**

Date: Saturday, June 29, 2013
Times: Flying 11:00 am to 1:00 pm
Location: RCCD Flying Field in Wetzel State Park (see map below)

Ample parking, pavilion seating, restroom facilities.

Space is limited; please call Algonac State Park at (810) 765-5605 to reserve a space.

The **Radio Control Club of Detroit** invites you to experience model aviation at our 2nd annual Introduction to Radio Control Aircraft 101.

Types of models to be shown * Scale; Large scale; Aerobatics; Aircraft powered only by electric propulsion; Aircraft powered only by 4-stroke engines; Aircraft that have either two or more wings or two or more engines; Combat planes that target 30-foot streamers towed behind opponents' aircraft, while defending their own streamers.

Registered participants will have an opportunity to experience R/C flying. After we describe the basic principles of R/C flight, you'll fly on the "Buddy System" - two transmitters connected by a cable. A club Intro Pilot will fly one of our R/C model aircraft to a safe altitude, controlling it with the primary transmitter. Then he will depress a switch on that transmitter to permit control by the secondary transmitter in your hands. You get to fly the plane. But don't worry; if you get the plane into trouble, he can regain control at any time by releasing the switch on his transmitter.

***(Typical aircraft flown at RCCD flying field. May not be available at this event.)**
